Strand 2: Algebra

Sub-strand 2: Algebraic Expressions

Lesson 1: Substitution, Simplification, and Real-Life Algebraic Modelling

1. Curriculum Standard and Overview

- Strand: 2 — Algebra
- Sub-strand: 2 — Algebraic Expressions
- Content Standard: B9.2.2.1
- Indicators:
- B9.2.2.1.2 — Substitute values into given formulae to evaluate them and use them to solve problems.
- B9.2.2.1.4 — Use knowledge of simplifying and factorising expressions to solve real-life problems (perimeter, area, age, money, quantities).
- Mock-paper links: P1 Q10, Q16, Q17, Q19, Q29; P2 Q4(d), Q6(a), Q6(c).

2. Preamble — Letters That Stand for Numbers

In algebra, a letter (called a variable or pronumeral) stands for a number we may not know yet — or a number that changes.

- Expression: a combination of numbers, letters and operations — e.g. 3x + 5.
- Term: one chunk of an expression — 3x, 5, −2xy are terms.
- Coefficient: the number multiplying the letter — in 3x, the coefficient is 3.
- Like terms: terms with the same letters raised to the same powers — 3x and 5x are like terms; 3x and 3x^(2) are not.

3. Substitution

To substitute means: replace the letter with the given number, then calculate carefully (keep brackets!).

Mock P1 Q10: Find 12x + 9q when x = 11 and q = 3.

$$12(11) + 9(3) = 132 + 27 = 159$$

Answer: B — 159.

Sign trap: if x = −2, then 3x = −6 and x^(2) = 4. Always use brackets: 3(−2) = −6.

4. Simplifying Expressions

4.1 Collect like terms

3x + 5x = 8x; 7a - 2a = 5a; 4xy + xy = 5xy.

4.2 Multiply terms

3 × 2x = 6x; 4(x + 2) = 4x + 8 (distributive property).

4.3 Difference of like products (Mock P1 Q16)

Sam has 5xy toffees, Joe has 20xy. Difference:

$$20xy - 5xy = 15xy$$

Answer: A — 15xy.

4.4 Indices in expressions

$$\frac{25x^{-4}}{5^{-3} \times 10x \times t^{-8}}$$

Work with numbers and letters separately.

Mock P2 Q6(c): Simplify frac{25x^(−4)}{5^(−3) × 10x × t^(−8)}.

Numbers: 25 ÷ (5^(−3) × 10). 5^(−3) = 1/125, so 5^(−3) × 10 = 10/125 = 2/25. 25 ÷ 2/25 = 25 × 25/2 = 625/2.

x terms: x^(−4) ÷ x = x^(−4-1) = x^(−5) = 1/(x^(5)).

t terms: dividing by t^(−8) = multiplying by t^(8).

$$\text{Answer: } \frac{625\,t^8}{2\,x^{\,5}} = \frac{625t^8}{2x^{\,5}}$$

5. Algebraic Modelling (Turning Words into Algebra)

5.1 Age problems (Mock P1 Q19)

Mina is x years old now. How old in 10 + y years?

$$\text{Age} = x + 10 + y$$

Answer: C — (x + 10 + y) years.

5.2 Evaluating a model (Mock P1 Q29)

Pig population = 5(2x - 3), x in months. After 4 months:

$$5(2(4) - 3) = 5(8 - 3) = 5 \times 5 = 25$$

Answer: B — 25.

5.3 Perimeter modelling (Mock P2 Q4d)

A rectangular route has length (x + 2) km and breadth (2x + 1) km. Perimeter = 48 km.

$$2\big[(x + 2) + (2x + 1)\big] = 48$$
$$2(3x + 3) = 48$$
$$6x + 6 = 48$$
$$6x = 42$$
$$x = 7$$

Answer: x = 7 km.

5.4 Area of a shaded region (Mock P2 Q6a)

Outer rectangle: (5x + 8) by (6x + 2). Inner unshaded: (x + 6) by 5x.

$$\text{Shaded} = (5x + 8)(6x + 2) - (x + 6)(5x)$$

Expand:

- (5x+8)(6x+2) = 30x^(2) + 10x + 48x + 16 = 30x^(2) + 58x + 16
- (x+6)(5x) = 5x^(2) + 30x

$$\text{Shaded} = (30x^2 + 58x + 16) - (5x^2 + 30x) = 25x^2 + 28x + 16$$

Answer: 25x^(2) + 28x + 16 square units.

5.5 Length from a diagram (Mock P1 Q17)

A rectangle has total length 9.7 cm along the top. The bottom is split 2.1, x, 3.4.

To find x: add 2.1 and 3.4, then subtract that sum from 9.7.

$$x = 9.7 - (2.1 + 3.4) = 9.7 - 5.5 = 4.2 \text{ cm}$$

Answer: A.

6. Factorising (Quick Preview — full treatment in later work)

Factorising = writing an expression as a product.

- Common factor: 6x + 9 = 3(2x + 3).
- Difference of squares: a^(2) - b^(2) = (a-b)(a+b).

7. Twenty Fully Worked Examples

Example 1 — Substitute (Mock P1 Q10)

12x + 9q at x = 11, q = 3 → 132 + 27 = 159. B.

Example 2 — Substitute with negatives

3x - 5 at x = −2: 3(−2) - 5 = −11.

Example 3 — Difference of like terms (Mock P1 Q16)

20xy - 5xy = 15xy. A.

Example 4 — Age (Mock P1 Q19)

x now → x + 10 + y in 10 + y years. C.

Example 5 — Evaluate a model (Mock P1 Q29)

5(2(4) - 3) = 25. B.

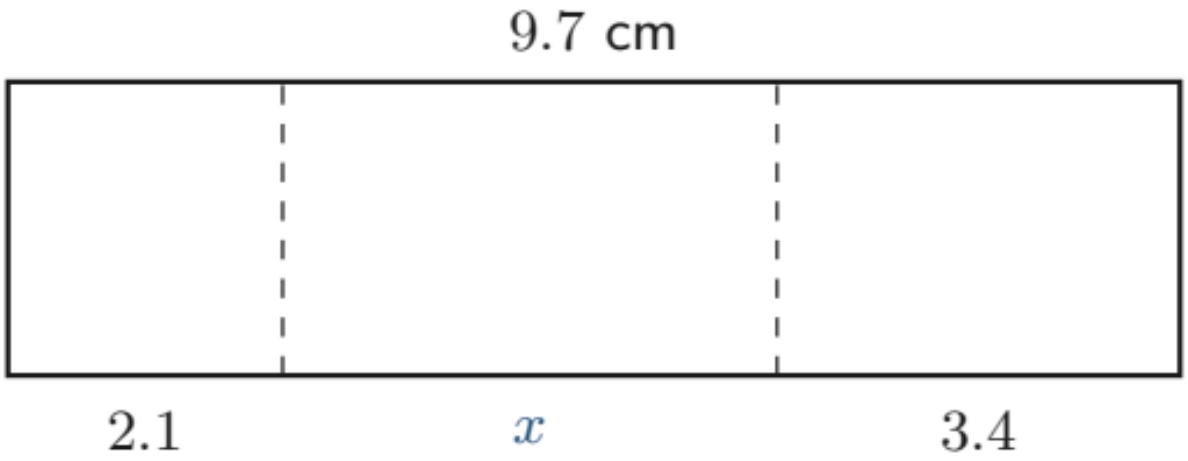

Example 6 — Perimeter (Mock P2 Q4d)

2[(x+2)+(2x+1)] = 48 → x = 7.

Example 7 — Shaded area (Mock P2 Q6a)

(5x+8)(6x+2) - (x+6)(5x) = 25x^(2) + 28x + 16.

Example 8 — Length from diagram (Mock P1 Q17)

$$2.1 + x + 3.4 = 9.7$$

x = 9.7 - 2.1 - 3.4 = 4.2. A.

Example 9 — Simplify indices (Mock P2 Q6c)
frac{25x^(−4)}{5^(−3) · 10x · t^(−8)} = 625 t^(8)/(2 x^(5)).

Example 10 — Collect like terms
3a + 5b - a + 2b = 2a + 7b.

Example 11 — Expand brackets
4(x + 2) = 4x + 8.

Example 12 — Expand and simplify
3(2x + 1) - 2(x - 4) = 6x + 3 - 2x + 8 = 4x + 11.

Example 13 — Cost model
Pens at GH₵ 2.50 each; n pens cost 2.5n cedis.

Example 14 — Evaluate cost model
n = 14: 2.5 × 14 = 35 cedis.

Example 15 — Rectangle area
Length (x + 3), width (x - 1): area = x^(2) + 2x - 3.

Example 16 — Average of expressions
Mean of 2x and 10: 2x + 10/2 = x + 5.

Example 17 — Money sharing
Share 12x cedis in ratio 1 : 2 → 4x and 8x.

Example 18 — Factorise common term
12a + 16b = 4(3a + 4b).

Example 19 — Word → algebra

"Three more than twice a number n": 2n + 3.

Example 20 — Mixed modelling

A box holds 5x - 3 sweets. 4 boxes hold 4(5x - 3) = 20x - 12 sweets.

8. Comprehensive Exercise Sets (40 Questions)

All 8 authentic mock items for this topic are included. Generated questions top up to 40. Spiral review ≈ 15%.

Exercise 1 — Substitution (includes mock)

1. [Mock 2026 P1 Q10] Find 12x + 9q when x = 11 and q = 3.
   A. 148 B. 159 C. 168 D. 172
2. Evaluate 3x - 5 when x = −2.
3. Evaluate x^(2) + 2x when x = −3.
4. Evaluate 5(2x - 3) when x = 4.
5. Spiral review: Find the gradient through (1, 2) and (4, −4).

Exercise 2 — Like terms & expansion (includes mock)

1. [Mock 2026 P1 Q16] Sam has 5xy toffees and Joe has 20xy toffees. How many more toffees has Joe?
   A. 15xy B. 15x C. 15y D. 4xy
2. Simplify 3a + 5b - a + 2b.
3. Expand 4(x + 2).
4. Expand and simplify 3(2x + 1) - 2(x - 4).
5. Spiral review: 124.3 + 0.275 + 74.06 to 1 d.p.

Exercise 3 — Age and quantity models (includes mock)

1. [Mock 2026 P1 Q19] Mina is x years old now. How old will she be in 10 + y years?
   A. (x - 10 + y) B. (x - 10 - y) C. (x + 10 + y) D. (x + 10 - y)
2. [Mock 2026 P1 Q29] The population of pigs is 5(2x - 3), x in months. Find the population after 4 months.
   A. 52 B. 25 C. 30 D. 15
3. Kofi is x years old. His father is 3 times as old. Find the father's age in 5 years.
4. A box holds 5x - 3 sweets. How many sweets do 4 boxes hold?
5. Spiral review: 9 men finish work in 51 days. Days for 17 men?

Exercise 4 — Perimeter & length models (includes mock)

1. [Mock 2026 P2 Q4(d)] The distance from A to B is (x + 2) km and from C to D is (2x + 1) km. These are the length and breadth of a rectangular route. The perimeter is 48 km. Find x.
2. [Mock 2026 P1 Q17] A rectangle has total length 9.7 cm along the top. The bottom edge is 2.1 cm, x cm, and 3.4 cm. Which method finds x?
   A. Add 2.1 and 3.4, then subtract the sum from 9.7
   B. Add 9.7 and 3.4, then subtract 2.1
   C. Subtract 2.1 from 3.4, then subtract the difference from 9.7
   D. Subtract 3.4 from 9.7, then add 2.1
3. A rectangle has length (x + 3) and width (x - 1). Find the area.
4. A rectangle has perimeter 20 cm and length (x + 2), width (x - 1). Find x.
5. Spiral review: Evaluate ⅔ × ¼ + ⅖ ÷ 14/15.

Exercise 5 — Shaded regions (includes mock)

1. [Mock 2026 P2 Q6(a)] Find the area of the shaded region: outer rectangle (5x + 8) by (6x + 2), inner unshaded rectangle (x + 6) by 5x.
2. A square of side (x + 4) has a square of side x cut out. Find the shaded area.
3. A rectangle 10 by 6 has a rectangle 4 by y removed. Express the remaining area.
4. Spiral review: n/100 = 10.5. Find n.
5. Spiral review: Classify −3 under ℕ, 𝕎, ℤ, ℚ.

Exercise 6 — Indices in expressions (includes mock)

1. [Mock 2026 P2 Q6(c)] Simplify frac{25x^(−4)}{5^(−3) × 10x × t^(−8)}.
2. Simplify x^(3) × x^(4).
3. Simplify a^(7) ÷ a^(2).
4. Simplify (2x^(2))^(3).
5. Spiral review: Solve (−3)^(x-2) = −243.

Exercise 7 — Word → algebra

1. Write "three more than twice a number n".
2. Write "the total cost of n pens at GH₵ 2.50 each".
3. Share 12x cedis in the ratio 1 : 2.
4. The mean of 2x and 10 is x + 5. Verify by substitution when x = 3.
5. Spiral review: A van travels 154 km in 1 ¾ hours. Speed?

Exercise 8 — Mixed modelling challenge

1. A rectangle has length (2x + 3) and width (x - 1). Expand the area expression.
2. Factorise 12a + 16b.
3. If the perimeter of a square is 4(x + 5), find the side length.
4. Spiral review: In a market of 36 fishmongers, 28 sell mackerel, 18 tilapia, 13 both. How many sell neither?
5. Spiral review: Find the equation of the line with gradient 7 through (−2, −3).

9. Full Step-by-Step Worked Solutions

Solutions to Exercise 1

1. 132 + 27 = 159 → B.
2. −6 - 5 = −11.
3. 9 - 6 = 3.
4. 5(5) = 25.
5. m = −2.

Solutions to Exercise 2

1. 20xy - 5xy = 15xy → A.
2. 2a + 7b.
3. 4x + 8.
4. 4x + 11.
5. 198.6.

Solutions to Exercise 3

1. x + 10 + y → C.
2. 5(5) = 25 → B.
3. Father now = 3x; in 5 years = 3x + 5.

4. 20x - 12.
5. 27 days.

Solutions to Exercise 4

1. 2(3x + 3) = 48 → 6x = 42 → x = 7.
2. x = 9.7 - (2.1 + 3.4) = 4.2 → A.
3. x^(2) + 2x - 3.
4. 2(2x + 1) = 20 → x = 4.5.
5. mathbf{25/42}.

Solutions to Exercise 5

1. 25x^(2) + 28x + 16.
2. (x+4)^(2) - x^(2) = 8x + 16.
3. 60 - 4y.
4. n = 1050.
5. ℤ, ℚ.

Solutions to Exercise 6

1. mathbf{625 t^(8)/(2 x^(5))}.
2. x^(7).
3. a^(5).
4. 8x^(6).
5. x = 7.

Solutions to Exercise 7

1. 2n + 3.
2. 2.5n.
3. 4x and 8x.
4. x + 5 = 8; 6 + 10/2 = 8 — correct.
5. 88 km/h.

Solutions to Exercise 8

1. 2x^(2) + x - 3.
2. 4(3a + 4b).
3. x + 5.
4. 3.
5. y = 7x + 11.

10. Authentic Mock Items in This Lesson

Ref	Question	Answer
P1 Q10	12x + 9q, x=11, q=3	B — 159
P1 Q16	20xy - 5xy	A — 15xy
P1 Q17	Length 9.7 split 2.1, x, 3.4	A (and x = 4.2)
P1 Q19	Age in 10 + y years	C — x + 10 + y
P1 Q29	5(2(4) - 3) pigs	B — 25
P2 Q4(d)	Perimeter 48, (x+2) and (2x+1)	x = 7
P2 Q6(a)	Shaded area	25x^(2) + 28x + 16

P2 Q6(c)	Simplify index expression	625 t^(8)/(2 x^(5))

11. Lesson Summary

Skill	Rule
Substitute	Replace letter, keep brackets, calculate
Like terms	Same letters, same powers
Expand	a(b + c) = ab + ac
Perimeter model	2(l + w)
Shaded area	outer − inner
Indices	a^(m) × a^(n) = a^(m+n), a^(m) ÷ a^(n) = a^(m-n)

Lesson prepared under `Grade9-Maths/Rules.md` — plain English, British notation, full workings required.
